# Lot - Foundation - Framing

spec sheet

# Lot Excavation

Link to  
[www.LetsRenovate.com/exterior-home-ideas/](http://www.LetsRenovate.com/exterior-home-ideas/)  
for information on site foundations

## Foundation Options

### Check Physical Features

- Trees to be removed or remain in place.
- Water-fronts or any other desirable views.
- Rocks or boulders that need to be removed or remain in place or repositioned.
- Any extra space requirements for house placement, garage entry (via side), front-yard dimensions, room for swimming pool, recreational space, and other
- These and other notations will determine how the lot should be excavated.

### Drainage

- Made sure the excavation allows for proper drainage away from the house and other planned features.
- Water must channel into natural or man-made tributaries.
- Be careful not to channel water into your neighbors or other property (drainage that is not already part of the natural flow).
- Note any plans to collect rain water that will be channeled in an underground storage unit.

### When Breaking Ground

- Note any utility lines that need to be marked.
- Note the required setbacks.
- Note that the area has been cleared and all trash and tree stumps removed.

# Foundation

Link to  
[www.LetsRenovate.com/exterior-home-ideas/](http://www.LetsRenovate.com/exterior-home-ideas/)  
for information on site foundations

## Foundation Options

### Slab Foundation

- Least expensive.
- Property must be graded relatively flat.
- Consists of poured concrete slab with depth to support interior walls.
- Generally suited for warmer climates.
- To get the foundation up off the ground in wet areas, you may consider a Raised Slab Foundation.
- Raised Slab Foundation consists of reinforced concrete block some 3 feet tall, interior back-filled with sand, and concrete slab poured as the floor system.

### Crawlspace Foundation

- Generally preferred for most homes especially if the lot slopes.
- Allows for utility, and sewage lines under the home.
- Consists of reinforced concrete block some 3 feet tall around the perimeter of the home with structural piers located under load bearing points.

### Basement Foundation

- Most expensive type foundation. Can be used as additional working or storage space.
- Find lots that slope up from front to back to avoid excessive fill or steps in the front of the home.
- Define type of basement: walk-out daylight basement or cellar type
- Will your basement be finished or unfinished.

### Chimney

- Describe type of chimney and number based on the number of open fireplaces in your home.
- Note that gas-only fireplaces do not require a chimney.

### Termite Infestation

- Test your foundation for termites. Eradicate any infestations prior to laying your foundation.

# Framing

Link to  
[www.LetsRenovate.com/exterior-home-ideas/](http://www.LetsRenovate.com/exterior-home-ideas/)  
for information on framing

## Type Framing

### Wood Framing

- Wood framing most commonly used in home construction.
- Plenty of skilled contractors with wood framing experience.
- Can be easily cut and fitted.
- Preferable for interior design when hanging fixtures and decorations.

### Steel Framing

- Steel framing growing in popularity, especially in tornado and hurricane prone areas.
- Stronger than wood. Can withstand some wind surges.
- Resistant to fire, mildew and molds, and wood-eating insects.
- Geometrically perfect for corners and window/door frames.
- Skilled contractors may be limited in your area.

### Framing Considerations

Once the framing starts, it can become very expensive for a structural change. It is very important that you plan your renovation project up-front before framing:

See size dimensions page 2

- Plan for all doors.
- Plan for all windows.
- Plan for all closets and ample storage areas.
- Plan for all room dimensions.
- Plan for all fireplaces
- Plan for all outside venting systems
- Plan for all stairways and home entry.
  
- Inspect spacing for HVAC, plumbing, and utility lines.
