Foundation

Link to
<http://www.LetsRenovate.com>
for information on site foundations

Foundation Options

- Slab Foundation**
 - Least expensive.
 - Property must be graded relatively flat.
 - Consists of poured concrete slab with depth to support interior walls.
 - Generally suited for warmer climates.
 - To get the foundation up off the ground in wet areas, you may consider a Raised Slab Foundation.
 - Raised Slab Foundation consists of reinforced concrete block some 3 feet tall, interior back-filled with sand, and concrete slab poured as the floor system.

more information at: <http://www.howstuffworks.com/house4.htm>

- Crawlspace Foundation**
 - Generally preferred for most homes especially if the lot slopes.
 - Allows for utility, and sewage lines under the home.
 - Consists of reinforced concrete block some 3 feet tall around the perimeter of the home with structural piers located under load bearing points.

more information at: <http://www.howstuffworks.com/house4.htm>

- Basement Foundation**
 - Most expensive type foundation. Can be used as additional working or storage space.
 - Find lots that slope up from front to back to avoid excessive fill or steps in the front of the home.
 - Define type of basement: walk-out daylight basement or cellar type
 - Will your basement be finished or unfinished.

more information at: <http://www.howstuffworks.com/house4.htm>

- Chimney**
 - Describe type of chimney and number based on the number of open fireplaces in your home.
 - Note that gas-only fireplaces do not require a chimney.

more information at: <http://www.LetsRenovate.com/exterior/>

- Termite Infestation**
 - Test your foundation for termites. Eradicate any infestations prior to laying your foundation.

more information at: <http://www.LetsRenovate.com>

Framing

Link to
<http://www.LetsRenovate.com>
for information on framing

Type Framing

Wood Framing

- Wood framing most commonly used in home construction.
- Plenty of skilled contractors with wood framing experience.
- Can be easily cut and fitted.
- Preferable for interior design when hanging fixtures and decorations.

Steel Framing

- Steel framing growing in popularity, especially in tornado and hurricane prone areas.
- Stronger than wood. Can withstand some wind surges.
- Resistant to fire, mildew and molds, and wood-eating insects.
- Geometrically perfect for corners and window/door frames.
- Skilled contractors may be limited in your area.

Framing Considerations

Once the framing starts, it can become very expensive for a structural change. It is very important that you plan your renovation project up-front before framing:

See size dimensions page 2

- Plan for all doors.
- Plan for all windows.
- Plan for all closets and ample storage areas.
- Plan for all room dimensions.
- Plan for all fireplaces
- Plan for all outside venting systems
- Plan for all stairways and home entry.

- Inspect spacing for HVAC, plumbing, and utility lines.
